| Office Action Summary | Application No. 10/773,585 | Applicant(s) JENKINS ET AL. |
| | Examiner MELISSA S. MERCIER | Art Unit 1615 |

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If no period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 05 June 2008.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 101,115-118 and 121-126 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 101,115-118 and 121-126 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) Notice of Informal Patent Application
- 6) Other: _____

DETAILED ACTION

Summary

Receipt of Applicants Remarks filed on June 5, 2008 is acknowledged. No amendments to the claims were submitted. The claims submitted on December 14, 2007 remain under prosecution in this application. Claims 101, 115-118, and 121-126 remain under prosecution.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 101, 115-118, 121, 123, and 126-127 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mise et al. (US Patent 4,837,020) in view of House (US Patent 5,188,064).

Mise discloses a deodorant composition comprising (a) D-glucosaccharoascorbic acid and (b) a ferrous compound and/or a cupric compound is disclosed. The composition displays excellent deodorant effects by removing the offensive and foreign odors rapidly, irrespective of whether they are originating from basic substances such as ammonia or those from acid substances such as hydrogen sulfide (abstract). Animal pens are disclosed as sources of the odor, therefore, it is the examiners position that one of ordinary skill in the art would look to animal litters. It is disclosed that the components (a) and (b) can be present in a solid composition, mixed in powdery state, evenly to the desired composition. The resulting composition may be used as support

on a porous material such as activated carbon and activated alumina. Deposition on such a porous material can be accomplished by preparing a solution of the deodorant composition, impregnating the porous material with a solution and drying the same (column 2, lines 39-59). The composition can also be applied to paper, a cellulosic material (column 2, lines 60-62).

Regarding the activated alumina particles being colored, it is the examiners position that activated alumina is colored in its natural state. The claims do not indicate a function of the coloring other than to distinguish the particles from other particles included in the composition; therefore, it is the position of the examiner that it would have been obvious to a person of ordinary skill in the art to add a coloring agent in order to visually distinguish the particles.

Mise does not disclose the use of clay.

House discloses a clumping cat litter comprising smectite clay admixed with a cellulosic material (column 2, lines 52-62). Preferred clays include bentonite clays provided that a sufficient number of their exchangeable cations are sodium cations to effect osmotic swelling (column 4, lines 20-28).

Applicant is reminded that where the general conditions of the claims are met, burden is shifted to applicant to provide a patentable distinction. Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. See *In re Aller*, 220 F.2d 454 105 USPQ 233,235 (CCPA 1955).

Furthermore the claims differ from the reference by reciting various concentrations of the active ingredient(s). However, the preparation of various sanitizing compositions having various amounts of the active is within the level of skill of one having ordinary skill in the art at the time of the invention. It has also been held that the mere selection of proportions and ranges is not patentable absent a showing of criticality. See *In re Russell*, 439 F.2d 1228 169 USPQ 426(CCPA 1971).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have used the incorporated the clays of House into the composition taught by Mise in order to eliminate or reduce the odors associated with animal urine and to provide a clumping sorbent having superior sorption capacity and sufficient cohesiveness when wetted with an aqueous liquid, such as urine, to be easily separated from the nonwetted sorbent particles. Additionally, since activated alumina, activate carbon and additional odor absorbing particles, in this case, the use of a clay, are all known in the art to be used in animal litter products, it would have been obvious to a person of ordinary skill in the art to combine the components into a single composition to be used for the same purpose.

Claim 119 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mise et al. (US Patent 4,837,020) in view of House (US Patent 5,188,064) and further in view of Heitfeld et al. (US Patent 4,957,063).

The combined teachings of Mise and House is discussed above and applied in the same manner.

Mise and House do not disclose the use of an antimicrobial agent.

Heitfeld teaches an odor control animal littler comprising an antimicrobial agent (column 2, lines 24-50).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have incorporated the antimicrobial agents taught by Heitfeld into the animal litter compositions taught by Mise and House in order to use a known technique for the same purpose and in a similar product. It is the examiners position that since it is known in the art to use antimicrobial agents in animal litter compositions, it would have been obvious to a person of ordinary skill in the art to have incorporates such a component into another litter composition with the expectation of the providing antibacterial properties.

Response to Arguments

Applicant's arguments have been fully considered but they are not persuasive. Applicant argues the Mise references does not disclose activated alumina particles having pores and fissures to provide odor absorption ability in animal littler. The pores and fissures in the non-impregnated activated alumina claimed by Applicants are available for odor absorption. It is respectfully submitted that Applicants claim language does not exclude the presence of the deodorant solution being present on the activated alumina. The activated alumina particles are disclosed as porous, which is what the instant claims require. Applicant's use of comprising terminology allows for the inclusion of any number of additional components, regardless of the material effect on the composition, in this case, the use of a deodorant solution. Therefore, the limitations

of the claim have been met. Furthermore, Applicant has argued the odor absorbing efficacy of the activated alumina alone is not sufficient to provide excellent deodorant effects. While the effects may not be deemed excellent as stated by Applicant, Mise does recognize that activated alumina does absorb odor, this does not constitute a teaching away as alleged by applicant, but rather a non-preferred embodiment. Mise has recognized deficiencies in the use of activated alumina as a sole "preferred" source of odor absorption.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MELISSA S. MERCIER whose telephone number is

(571)272-9039. The examiner can normally be reached on 8:00am-4:30pm Mon through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward can be reached on (571) 272-8373. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
